

LIC. ALVARO RICHARD SILES ESTRADA

SYSTEMS ENGINEERING

PROFESSIONAL PROFILE

Systems Engineer with over 9 years of professional experience in technology, systems and IT infrastructure, including networking, servers, databases, connectivity and business solution development. Responsible, proactive and adaptable professional with strong analytical and problem-solving skills and a focus on continuous improvement.

Experience designing, implementing, administering and maintaining LAN/WAN networks, Linux and Windows servers, cloud, databases and technology solutions for companies and clients. Experience diagnosing and resolving connectivity incidents, IP address management, Internet service providers, backups and technical documentation.

I complement my infrastructure and systems experience with software development skills, systems integration, APIs, automation and data management, which lets me address technology requirements from a comprehensive perspective.

INTERPERSONAL SKILLS

- Proactivity, leadership and team coordination.
- Proactivity and initiative.
- Analytical thinking and problem solving.
- Teamwork.
- Adaptability.
- Communication and service orientation.
- Organization and accountability.

PERSONAL INFORMATION

NAME: Alvaro Siles Estrada
NATIONALITY: Bolivian
CITY: Santa Cruz de la Sierra
DRIVER'S LICENSE: Category A, M
LANGUAGES: Spanish (Native), English (Intermediate)

CONTACT

Phone: 69050028
Email: alvarosiles.developer@gmail.com
Website: https://alvarosiles.cloud/

EDUCATION

- Primary education: Colegio San Martín de Porres, Santa Cruz de la Sierra.
- Secondary education: Colegio Padre Jaime, Santa Cruz de la Sierra.
- Bachelor's degree in Systems Engineering (NUR).
- Diploma in Architecture with Microservices (NUR).

ADDITIONAL TRAINING

- Computer Operator course (KOLPING) 2008.
- Computer Maintenance and Repair Course
- (CEPESS) 2010.
- Military service – Santa Cruz, Bolivia 2011
- Intermediate English course (CBA) 2014.
- Seminar on Bootcamp Santa Cruz (UPSA) 2015.
- Google Technology Seminar (UPSA) 2015.
- Google Developer Group (NUR) 2017.
- Angular 4 Seminar (DOMINGO SAVIO) 2017.
- Project Fair Certificate (NUR) 2018.
- Certificate Megasystem 2019
- Certificate React Native (Udemy) 2020.
- Certificate of Law No. 1178 (NEMABOL) 2021.
- Certificate of D.S. No. 23318-A (NEMABOL) 2021.
- Certificate of DHSP SMB-IA (SISEGUSA) 2021.
- Certificate of DHSP-SMB-TECHNICAL DAHU A2021.
- Professional degree in Systems Engineering (NUR) 2021
- Certificate Git and GitHub (Udemy) 2021.
- Certificate Windows Terminal (Udemy) 2021.
- Certificate Linux Server (Udemy) 2021.
- Certificate Android Studio and Firebase (Udemy) 2021.
- Certificate Power BI (Udemy) 2022
- Certificate Excel for Business (Udemy) 2022
- Certificate Personal Finance (Udemy) 2022
- Certificate Syslink Bolivia (Udemy) 2022
- Certificate PowerPoint Course (Udemy) 2021
- Certificate Microsoft Word - Basic to Advanced Level MS
- Word Course (Udemy)

WORK EXPERIENCE

CAREER SUMMARY

Full Stack Software Engineer with over 9 years of professional experience in technology, systems, and web and mobile software development. Experience in full Stack development, requirements analysis, IT infrastructure, servers, networks, databases and team leadership. Specialized in React, Angular, Node.js, Java, React Native, Docker and Linux.

2012–2014: Started my career as Systems Supervisor at UNIVERSIDAD NUR, managing infrastructure, laboratories and technical support.

2017–2020: At MEGASYSTEM SRL, I began my professional experience in software development, project management and business systems implementation.

2020–2023: Consolidated my experience in web and full Stack development at CHINREPUESTOS, MALL FACILITO, SYSLINK and SERVISOFTS.

2023–2025: As Systems Manager at CALISTENIA BOLIVIA SRL, I led a team and managed development, infrastructure and technology.

2025–2026: At SERVISOFTS SRL, I continued as Full Stack Developer, developing web and mobile applications and managing infrastructure and deployments.

SERVISOFTS SRL *(Most recent job)*

IT – Systems / Full Stack Developer

Period: August 2025 – August 2026

Tasks performed:

Infrastructure, Servers and Networks

- Administration, configuration and backup of the company's physical servers.
- Installation and configuration of Ubuntu Linux servers.
- Configuration and maintenance of LAN/WAN networks.
- Preventive and corrective maintenance of technology infrastructure.
- Support and configuration of production servers.
- Automation of database backups on Linux servers.
- Administration and management of client database backups.

Design and Development

- UX/UI design of web and mobile applications using Figma.
- Development of prototypes to validate and refine requirements.
- Development of mobile applications with React Native.
- Development of frontend with React and backend with Java, Node.js and PostgreSQL.
- Development and integration of business modules and features.

Testing and Quality Assurance

- Functional testing of web and Android mobile applications.
- Testing locally and remotely in staging and pre-production environments.
- Validation of features before production deployment.

DevOps and Infrastructure

- Implementation and deployment of applications using Docker.
- Automation of database backups on Linux servers.
- Administration and backup of physical servers and client databases.
- Installation and configuration of Ubuntu Linux servers.
- Configuration and maintenance of LAN/WAN networks.
- Preventive and corrective maintenance of technology infrastructure.
- Support and configuration of production servers.

Publishing and Management

- Tracking and publishing of mobile applications on Google Play Store.
- Management and follow-up of client billing.

Preparation of operational and technical reports.

CALISTENIA BOLIVIA SRL

IT – Systems / Systems Manager

Period: March 2023 – August 2025 (2.5 years)

Tasks performed:

Leadership and Management

- Leadership and coordination of a team of 2 developers.
- Implementation of IT security policies.
- Management of budget, technology procurement and suppliers.
- Preparation and presentation of reports to management.

Development and Applications

- Requirements analysis, UX/UI design and development of web and mobile applications.
- Development of dashboards for data analysis and visualization.
- Maintenance, optimization and updating of existing applications.
- Implementation of unit and integration tests, version control and repository management.
- Coordination of updates and production deployments.
- Integration with access control systems, biometric registration and external services via webhooks.

Databases, Servers and Networks

- Implementation, administration and maintenance of databases and servers.
- Management of backups for central servers, email, applications and DNS.
- Administration of LAN/WAN and wireless networks in offices and branches.
- Design and implementation of network infrastructure.
- Management of IP addresses, corporate domains and Internet service providers.
- Troubleshooting connectivity issues and optimizing bandwidth.

Security and CCTV

- Installation, administration and maintenance of CCTV systems.
- Management of recording storage and backup.
- Administration of access control systems and smart locks.

Systems and Technical Support

- Administration and maintenance of Windows, macOS and Linux systems.
- On-site and remote technical support using AnyDesk.
- Installation and configuration of software, printers and devices ZKTeco.
- Maintenance and updating of computer equipment in offices and branches.
- Management of business services, including corporate email, Internet and messaging.

Corporate Credentials and Services

- Administration and updating of credentials for servers, domains, email and corporate platforms.
- Management and contracting of technology services and suppliers.

Reports and Documentation

- Preparation of technical and dynamic reports according to management requirements.

SERVISOFTS SRL *(First time)*

IT – Systems / Full Stack Developer

Period: July 2022 – March 2023 (8 months)

Tasks performed:

Design and Development

- Requirements analysis, UX/UI design and prototyping for web and mobile applications using Figma.
- Development of full-stack web applications using Java, Node.js and React.
- Development of cross-platform mobile applications with React Native.
- Development and integration of REST APIs using Node.js and Express.
- Implementation of authentication and authorization mechanisms using JWT.
- Integration of third-party services and APIs.
- Development and maintenance of modules and features for business applications.
- Bug fixing, optimization and evolutionary maintenance of existing applications.

Testing and Quality Assurance

- Functional testing and validation of web and mobile applications.
- Identification, tracking and correction of defects throughout the development cycle.
- Validation of features before release to test and production environments.

Infrastructure and Support

- Administration, configuration and backup of the company's physical servers.
- Installation and configuration of Ubuntu Linux operating systems.
- Configuration and maintenance of LAN/WAN networks.
- Technical support and maintenance of technology infrastructure.
- Configuration and maintenance of services required by business applications and systems.

Documentation and Methodology

- Preparation and updating of project technical documentation.
- Participation in analysis, planning and task tracking using the Scrum methodology.
- Coordination with other developers for implementing and maintaining features.
- Management and version control of source code using Git repositories.

SYSLINK BOLIVIA

IT – Systems / Full Stack Developer

Period: December 2021 – July 2022 (7 months)

Tasks performed:

Software Development

- Requirements analysis, UX/UI design and prototyping for web and mobile applications using Figma.
- Development of full-stack web applications using Java, Node.js and React.
- Development of cross-platform mobile applications with React Native.
- Development and integration of features and services for business applications.
- Functional testing and validation of web and mobile applications.

Infrastructure and Systems

- Administration, configuration and backup of servers on Google Cloud.
- Installation and configuration of Windows, Windows Server and Ubuntu Linux.
- Configuration and maintenance of LAN/WAN networks.
- Technical support and maintenance of technology infrastructure.
- Diagnosis and resolution of incidents in systems, servers and networks.

Client Network Projects

- Design and implementation of network infrastructure for clients.
- Evaluation and quoting of materials, equipment and connectivity solutions.
- Procurement and management of technology equipment for projects.
- Installation, configuration and commissioning of networks at client sites.

CCTV and Security Systems

- Design and implementation of video surveillance and security solutions.
- Installation and configuration of CCTV systems at client premises.
- Preventive and corrective maintenance of video surveillance systems.
- Management of camera recording storage and backup.

Support and Training

- Technical support and handling of incidents for end users.
- Training clients in the use and administration of CCTV systems.
- Preparation of user manuals and documentation.

EL MORDISCO

IT – Systems / In Charge

Period: July 2021 – December 2021 (5 months)

Tasks performed:

Systems and Point of Sale (POS)

- Administration and management of the restaurant's point-of-sale system.
- Management of ordering platforms, including PedidosYa and online orders.
- Registration and updating of the product and menu catalog in the system.
- Support and maintenance of kitchen and bar order printers.

Cash Handling, Collections and Invoicing

- Management of collections and electronic and paper invoicing.
- Handling of payment methods: cash, cards and bank transfers.
- Management of operations through Linkser, including collections, cancellations and reports.
- Cash register opening, closing and control, including cash counts and daily reconciliation.

Inventory and Operations Management

- Inventory and product stock control.
- Management of suppliers, orders and procurement.
- Sales analysis and tracking of consumption trends.
- Generation of cash, sales and operations reports.

MALL FACILITO

IT – Systems / Front End Developer

Period: January 2021 – July 2021 (6 months)

Tasks performed:

Web Development

- Design of web interfaces and prototyping using Figma.
- Development of websites using HTML, CSS, Bootstrap, JavaScript and jQuery.
- Development of a responsive e-commerce platform for different devices.
- SEO optimization and positioning of websites.
- Maintenance and updating of features on existing platforms.

Testing and Quality Assurance

- Functional and cross-browser/cross-device testing.
- Identification and correction of interface and functional bugs.

Infrastructure and Databases

- Administration and backup of databases on Linux servers.
- Maintenance and backup of company servers.
- Basic infrastructure and systems support.

Support and Customer Service

- Technical support for computer equipment and digital platforms.
- Training clients in the use of systems and software.
- Handling and resolution of incidents via phone and digital support.

Sales Support and Documentation

- Support in the sale and marketing of software solutions.
- Preparation of reports and documentation related to the area's activities.

CHINREPUESTOS AUTO PARTES

IT – Systems / Support and Web Development

Period: July 2020 – January 2021 (6 months)

Tasks performed:

Web Development

- Development and maintenance of web pages using HTML, CSS, Bootstrap, JavaScript and jQuery.
- Creation and updating of web interfaces and content.

Infrastructure and Networks

- Configuration and maintenance of computer equipment.
- Administration and maintenance of the company's internal network and systems infrastructure.
- Support for company communications and connectivity.

Technology Management

- Acquisition and administration of corporate domains.
- Procurement and management of equipment and technology resources for the company.

Systems and Backups

- Backup and maintenance of systems and databases.
- Management of backups for critical company information.

Technical Support

- Support and maintenance of thermal printers and Zebra label printers.
- Resolution of incidents related to equipment and systems.

Documentation

- Preparation of technical reports and documentation.

MEGASYSTEM SRL

IT – Systems / Project Manager

Period: July 2017 – July 2020 (3 years)

Tasks performed:

Project and Client Management

- Planning and management of software projects with multidisciplinary teams.
- Coordination and supervision of a team of 3 people.
- Requirements gathering and analysis with business clients.
- Planning, tracking and coordination of deliveries and production releases.
- Client management and follow-up during solution implementation.

Software Development

- Development of web applications and modules using Angular.
- Development and customization of the company's ERP modules.
- Implementation and configuration of business management solutions.
- Functional testing of web, mobile and desktop applications.

Implementation of Management Systems

- Implementation and rollout of systems for different business types: distribution, grocery stores, restaurants, restobars, minimarkets, hardware stores, logistics, fast food, accounting, auto parts and SFV invoicing.
- Configuration and adaptation of systems to each client's requirements and processes.
- Training and support during system implementation.

Infrastructure and Servers

- Administration and backup of Cloud servers.
- Implementation, configuration and maintenance of servers for clients.
- Administration and backup of physical servers.
- Installation and maintenance of operating systems.
- Configuration and maintenance of LAN/WAN networks.
- Technical support and maintenance of technology infrastructure.

Equipment and Specialized Systems

- Design and implementation of CCTV video surveillance systems.
- Installation and configuration of cash registers and point-of-sale equipment.
- Implementation and support of attendance control systems.
- Installation and support of multifunction printers, Epson thermal printers and Zebra label printers.
- Installation and configuration of barcode and QR code readers.

Training and Documentation

- Training and follow-up of users on web, mobile and desktop systems.
- Preparation of user manuals and video tutorials.
- Preparation of project technical documentation and reports.

TRANSPORTADORA ROART SRL

Logistics and Container Operations Assistant

Period: January 2017 – July 2017 (6 months)

Tasks performed:

Logistics and Operations

- Logistics and container operations assistant.
- Tracking of shipments and containers.
- Coordination with carriers and clients.
- Resolution of logistics incidents.

Customs and Documentation

- Management of customs and transport documentation.
- Delivery and collection of company documentation.

Data Administration

- Administration of the carrier's systems.
- Maintenance of the operations database.

Customer Service and Finance

- Telephone support for clients.
- Handling and coordination of floor requests.

- Handling of large cash amounts.

Documentation

- Reports of all kinds.

UNIVERSIDAD NUR

IT – Systems / Supervisor

Period: February 2012 – December 2014 (2 years)

Tasks performed:

Supervision and Team Management

- Supervision of the laboratory technical team.
- Responsible for maintaining, organizing, troubleshooting and supervising computer lab facilities.

Classroom and Lab Management

- Handling and coordination of classroom bookings.
- Requests for software installation in classrooms.
- Requests for classroom setup for exams.

Infrastructure and Systems

- Installation and maintenance of operating systems.
- Installation and configuration of LAN-WAN networks.
- Administration of a proxy server.
- Technical support for teaching rooms and classrooms.

Maintenance and Licenses

- Preventive equipment maintenance.
- Management of educational software licenses.
- Hardware inventory management.

Support

- Support for students and faculty.

Documentation

- Reports of all kinds.

CORE COMPETENCIES

Full Stack Software Engineer with over 9 years of experience developing web and mobile applications and business solutions. I am passionate about building technology solutions that streamline processes, solve problems and create value for organizations. I have experience in frontend and backend development, systems integration, database management, technology infrastructure. I am committed to quality, continuous improvement, lifelong learning and teamwork, always aiming to build efficient, secure and maintainable solutions.

1. Software Engineering and Full Stack

- **Backend:** Java, Node.js, Express.js, PHP, Laravel, ASP.NET and Python.
- **Frontend:** React, Angular, Vue.js, JavaScript, TypeScript, HTML5, CSS3, Bootstrap and jQuery.
- **API Development:** design, development, integration and consumption of RESTful APIs and third-party services.
- **Architecture and design:** MVC architecture, microservices, Object-Oriented Programming (OOP) and functional programming.
- **Authentication and authorization:** JWT, OAuth and OpenID Connect (OIDC).
- **System integration:** development of features, interoperability and business process automation.

2. Mobile Application Development

- Development of Android applications with Java and Android Studio.
- Cross-platform development with React Native.
- Integration of services and APIs in mobile applications.
- Functional testing, version validation and mobile quality assurance.
- Management of the publication and update process for applications on Google Play Store.

3. Databases and Information Management

- **Relational databases:** PostgreSQL, MySQL, Microsoft SQL Server and Oracle.
- **NoSQL databases and data services:** MongoDB and Firebase.
- Database administration, maintenance and backup.
- Backup automation and data recovery procedures.
- Data integrity, availability and security management.
- SQL queries and optimization of information access operations.

4. DevOps, Cloud and Deployment

- **Containers:** Docker and deployment of containerized applications.
- **Cloud platforms:** Google Cloud Platform, Microsoft Azure, DigitalOcean and UpCloud.
- **Deployment platforms:** Heroku and Railway.
- **Web servers:** Nginx, Apache and IIS.
- **Automation:** Bash/Shell scripts and backup automation.
- **Continuous integration and delivery:** CI/CD concepts and practices.
- Deployment, configuration, maintenance and support of applications in production.
- Log monitoring and troubleshooting of infrastructure and applications.

5. Infrastructure, Networks and Operating Systems

- Administration and maintenance of physical and virtual servers.
- Administration of Ubuntu Linux Server and Windows Server.
- Configuration and maintenance of LAN/WAN and wireless networks.
- TCP/IP, IP addressing, DNS, proxy servers and domain management.
- Management of connectivity, bandwidth, VPN and corporate email services.
- Backup management, data recovery and business continuity.
- Diagnosis and resolution of technology infrastructure incidents.

6. Testing and Quality Assurance

- Functional testing of web and mobile applications.
- Unit and integration testing.
- Feature validation in local, staging and pre-production environments.
- Testing and integration of backend services and APIs.

- **Tools:** JUnit, Mockito, Mocha, Cucumber, Postman, Insomnia and Swagger/OpenAPI.
- **Code quality:** ESLint, Prettier and SonarLint.

7. Analysis, UX/UI Design and Documentation

- Functional and technical requirements analysis and gathering.
- Design of interfaces and user experiences for web and mobile applications.
- Development of interactive prototypes and validation of design proposals.
- **Design tools:** Figma, Adobe XD, Sketch, Photoshop and Illustrator.
- **Diagramming and modeling:** UML and Draw.io.
- Technical documentation, feature specification and issue tracking.

8. Data Analysis and Reporting

- Preparation of technical, operational and business reports.
- Information analysis, management indicators and trends.
- Creation of dashboards and visualizations with Power BI.
- Advanced Microsoft Excel and productivity tools.
- Organization, consolidation and tracking of information to support decision-making.

9. Version Control and Development Tools

- **Version control:** Git, GitHub, GitLab and Sourcetree.
- **Development environments:** Visual Studio Code, Visual Studio, NetBeans and Android Studio.
- **Management and collaboration:** Jira, Confluence, Notion and Miro.
- **Virtualization:** VirtualBox, VMware and Parallels.
- **Productivity:** Microsoft 365, Office and Google Drive.

10. Technical Leadership and Project Management

- Requirements analysis and coordination of development activities.
- Organization and tracking of tasks using agile methodologies, especially Scrum.
- Coordination of technical teams and cross-functional collaboration.
- Management of incidents, documentation and deliverable tracking.
- Management of suppliers, technology procurement and administration of technology services.
- Participation in resource planning, IT budgets and IT security policies.

11. Electronic Security and Access Control

- Installation, configuration and maintenance of CCTV systems.
- Administration of video surveillance systems and NVR/DVR devices.
- Management of recording storage and backups.
- Configuration and support of access control systems and biometric ZKTeco devices.
- Monitoring, diagnosis and resolution of electronic security incidents.
- Management of credentials and access control to corporate systems.
